# **SEEKS** CAUSE OF LOVE

PROF. HALL TAKES CENSUS FROM HAPPY YOUNG COUPLES.

Learns That Eyes, Hair and Sometimes Freckles Attract Young Ladies-Says Half of College Women Don't Marry.

Bosten.-Precisely what it is-what attribute or physical characteristic, in the youth or maiden, the man or woman, that most attracts one of the opsize sex, is the problem of which Dr. G: Stanley Hall, professor of psychology in and president of Clark universi-Worcester, Mass., has set out to find the solution.

To this end he has taken a census of young lovers, with a view to learning what in each case has most endeared to him or her the particular object of the affections.

It was Dr. Hall who recently declared that 50 per cent, of college women failed to marry, thus contributing to race suicide. The complete result of this census of sweethearts Dr. Hall has not yet given to the public, but he has made known an abstract of

what he has learned. With hundreds of sweethearts heard from, Dr. Hall states that the characteristics specified by them are, in the

order of their frequency, as follows: Eyes, hair, size or stature, feet, brows, complexion, cheeks, form of head, throat, ears, chin, hands, neck, nose, finger nails and contour of face.

Which is to say that more of those lovers interrogated have found the New Serum Discovered by Berlin Proloved one's eyes or hair the chief attraction than anything else.

The women replying to Dr. Hall's questions have also specified these charms in the men they loved best: Regular teeth, broad shoulders, and white teeth; and most popular among

men have long lashes and arched chief authority on infectious diseases. According to some of those replying, a retrousse nose, freckles and a long

neck have been the chief charms. The voice cuts an important figure among the charms. With some it is a of the ailment disappeared after three high voice; with others a low voice. Even a lisp has been stated as a charm. Laughter, carriage, gait, gesture, movements of the eye, poses of the head and shoulders have also been specified in the replies.

#### FINDS MORE SPOTS ON SUN.

Latest Discovered Group Has Length of 82,000 Miles.

Washington.-An enormous group of solar spots has been observed for the Rockefeller institute for medical refirst time by Prof. George H. Peters of the United States naval observatory the best known American medical with the photo-heliograph.

"They probably appeared on the sun's eastern edge two or three days STOLE A TRAIN FOR A LARK. ago," said Prof. Peters, "but owing to clouds the observations were unobtainable here until now.

"The group at present consists of two large spots connected by a somewhat smaller one. There are a few outlying spots. The total length of the group is \$2,000 miles, while its breadth is about 39,000 miles. It is nearly one tenth the apparent diameter of the sun and can be easily seen through smoked or colored glass.

This group is in the southern hemisphere in the part known as the sun spot zone, as was the enormous group announced last February."

Carnegie Gives More Libraries. York. - Andrew Carnegie has notified the trustees of the York public library that they may increase the number margin that the pursuing crew was of branch library buildings creeted able to get off the track. McCutchson old steamer Dolphin, Guy M. Tetley he will pay the bill. This will bring an abrupt stop. ber of branch library buildings from experience. He was taken to the city end of the system. 78 to 100.

## GET MAIL BY WATER

MARINE RURAL FREE DELIVERY IN NEW HAMPSHIRE.

Cottagers Along Lakes Brought Into Closer Touch with Outside World During Summer Months-Growth of Service.

Laconia, N. H .- "Marine free rural delivery route No. 3" has no counterpart within the limits of the United States, It was inaugurated June 1, delivery of mail service on Lake Winnipiscogee.

Instead of the Postman's ring or knock, cottagers for over a distance of 50 miles between the southerly end of Lage Paugus, at Lakeport, and Wolfeboro, at the other end of the lake, hear each morning the shrill blast of the mail steamer. An amphiblous mail carrier winds in and out of the regular pathway of the passenger steamers and delivers all classes of mail matter practically at the doors of the thousands of cottagers who make their homes during the summer months in this region.

It is a city delivery transferred to the country, and on water instead of Its establishment has brought every camp and cottage along the shore and spon the many Islands in close touch with the outside world. A double daily service now makes it possible for the Boston business man in his Island camp ten miles or more down the lake to receive his office mail in the early forenoon and have his replies back in the Boston post

Mail Steamer "Dolphin."

office before nine o'clock the same evening.

For this service the only requirements demanded by the post office department are that the owners or occupants of the cottages and camps shall provide suitable landing places for the busy little steamers engaged in the mail delivery. Upon these landings are erected suitable letter boxes of a design furnished by the department, and they are so placed as to be available for the carrier without putting him to undue delay.

This service consists of a daily delivery from May 15 to October 15, except during July and August, when two deliveries daily will be made to the greater portions of the landings. Registered letters, too, are received coal is lost by the use of boilers, and delivered by the carriers, who are wheels and dynamos. With the direct also captains of the boats upon which generation of the electrical current, they make their trips. Money orders are as available as at the regular money order offices.

"Marine free rural delivery route No. 3" is not the result of a day's or a year's study. It is the steady growth and the fruits of a service inaugurated several years ago as an experiment on the part of the post office department. Berlin.-Marked success has been Charles E. Buzzell, postmaster at Lakeport, was its originator, and un- grace, like a fairy. gitis in Berlin with the aid of a new der his guiding hand the service has been developed and perfected to its man, successor of Prof. Koch as the The cure was effected under the congressional delegation and former direction of Dr. Herman Schmidt, chief of the First Army hospital, of Berlin, in the case of a soldier lying located on the route of the mail at death's door. The worst features

boat. There has not been a single back ward step since the inception of the service, and the business has practically doubled each year. For one week of the season of 1906 the number of pieces of mail matter delivered exceeded by several hundred that of the year when the route was first established.

The first boat used when the route was established was the Robert and Arthur, owned by the first carrier, Dr. George H. Saltmarsh of Lakeport, now state senator for the Fourth district. The capacity of this boat be ing insufficient for the fast increasing business, the steamer Dolphin was built. Up to the last year she fully met all the requirements of fast delivery, but during that season the business of route 3 grew to such proportions that a larger and faster steamer was found necessary.

So a swift and commodious mail steamer was built at Lakeport, and will be placed in commission this summer. She has been christened Uncle Sam, and is designed to make the trips between Lakeport and Long Island, where close connection will be made with the older steamer Dolohin. which will continue the delivery to high speed. The bell was ringing and all cottages and camps between the point and Wolfeboro, at the extreme

TAUGHT FOR HALF A CENTURY. Record of Usefulness for Massachusetts School Teacher.

A headmaster for half a century in the Cambridge schools is the remarkable record of Ruel H. Fletcher, of the Thorndike school, East Cambridge, He has recently graduated his fiftieth

class from that school. For fifty-eight years he has taught school, beginning in 1849. He came to Massachusetts in 1852, taught school two years in Abington, two years in Quincy and then began his long service in Cambridge. That service was started in the Otis school, for which a In unofficial pariance, it is the free new building was erected a few years after and the name changed to the Thorndike school, so that his service has been practically in the one school,

When the city of Cambridge erected two new school buildings four years ago, unknown to him the pupils of his school circulated a petition that one of the new schools be named in honor of the headmaster to whom they were so devoted. The decision of the committee to comply with their request was prompt and unanimous The Fletcher school graduates its first class on Tuesday, and Mr. Fletcher will be a guest of honor on that occasion.-Boston Herald

#### BOOST PRICES OF LABOR.

Natural Result of American Demand for Dates.

For a long time the export of dates from the Persian gulf to America was in the hands of one or two firms. Now the field has been entered by others, and during the past season six con cerns in Maskat were packing dates for American exporters. This compe tition serves to keep the price well up, as the date caravans come in from the interior and sell their cargoes at auction. Contracts for future delivery are often made with growers and money advanced, but even then deliv cries are usually made subject to the prices prevailing at the time. There has been some difficulty experienced this year in securing labor to pack the dates for the American market. This work is done by women, and the increased trade resulted in a scarcity of hands and an increase of wages. It he situation exists again next year if can probably be met by importing labor either from India or Baluchistan for the packing season, which begins in August and is usually over early in January at the latest.

All at Sea. "Gentlemen," recently said a Gernan professor, who was showing to his students the patients in the asylum, "this man suffers from delirium tremens. He is a musician. It is well known that blowing a brass instrument affects the lungs and throat in such a way as to create a great thirst which has to be allayed by persistent indulgence in strong drink. Hence in course of time, the disease you have before you. Turning to the patient, the profes-

or asked: "What instrument do you blow?

and the answer was: "The violoncello."-Illustrated Bits.

a friend living in the town through which the line was to run. A letter to him, with her savings, would have enabled him to buy at a low price the land the road needed, and the peculiar nature of the ground in that neighborhood would have enabled him to sell at a great profit. She did not consider the thing more than a minute, and then decided that it would be a dishonorable thing to real estate office became aware of a deal in which \$150,000 was involved. Certain information she possessed stenographer was offered \$1,000 for written. A lawsuit in which her employers were involved might have gone against them had the opposing party been able to secure the information contained in the three letthe permission to read the letters. The girl scorned the offer.

## LONDON USES MUCH WATER.

Enough in One Year to Float the Navies of the World.

It has been calculated that if a cistern covering 850 acres and 345 feet high could be constructed and the water supply of London for one year turned into it, the warships of all the world's navies could ride at anchor there. The figures are given by Tit-Bits. It adds: "If we now dia a canal 100 feet wide across Europe, from the extreme north to the south, and empty our cistern into it, we shall find that the water in our canal, which is 2,400 miles long, will rise to a uniform height of ten feet. Every drop of it is consumed by the inhabitants of Greater London within a year, while each man, woman and child living to-day throughout the world could draw 50 gallons from it without exhausting its contents. The mains through which these hundreds of millions of tons of water flow for the use of London are almost long enough to stretch a quarter of the way around the earth at the equator, while it would take a locomotive, traveling at the rate of 60 miles an hour, more than four days and nights to race from one end of them to the other.
